Name: DNS Hostname Brute Forcer
Author: Tim Tomes (@lanmaster53)
Version: 1.0

Description:

Brute forces host names using DNS. Updates the 'hosts' table with the results.

Options:

Name	Current Value	Required	Description
SOURCE	default	yes	source of input (see 'info' for details)
WORDLIST	/home/kali/.recon-ng/data/hostnames.txt	yes	path to hostname wordlist

Source Options:

default	SELECT DISTINCT domain FROM domains WHERE domain IS NOT NULL
<string>	string representing a single input
<path>	path to a file containing a list of inputs
query <sql>	database query returning one column of inputs

[recon-ng][lab][brute_hosts] > options list

Name	Current Value	Required	Description
SOURCE	default	yes	source of input (see 'info' for details)
WORDLIST	/home/kali/.recon-ng/data/hostnames.txt	yes	path to hostname wordlist

[recon-ng][lab][brute_hosts] > options set source example.com

SOURCE → example.com

[recon-ng][lab][brute_hosts] > options list

Name	Current Value	Required	Description
SOURCE	example.com	yes	source of input (see 'info' for details)
WORDLIST	/home/kali/.recon-ng/data/hostnames.txt	yes	path to hostname wordlist

[recon-ng][lab][brute_hosts] > input

To return to your computer, move the mouse pointer outside or press Ctrl+Alt.

Brute forces host names using DNS. Updates the 'hosts' table with the results.

Options:

Upgrading: 0, Installing: 0, Removing: 0, Not Upgrading: 443
kali@kali)~$ dnsrecon -h
usage: dnsrecon [-h] [-d DOMAIN] [-il INPUT_LIST] [-n NS_SERVER] [-r RANGE] [-D DICTIONARY] [-f] [-a] [-s] [-b] [-y] [-k] [-w] [--shodan] [--shodan-active] [--shodan-key SHODAN_KEY] [-z]
               [--threads THREADS] [--lifetime LIFETIME] [--loglevel {DEBUG,INFO,WARNING,ERROR,CRITICAL}] [--tcp] [--db DB] [--x XML] [--c CSV] [--j JSON] [--iw] [--disable_check_nxdomain]
               [--disable_check_recursion] [--disable_recurs] [--disable_check_bindversion] [-V] [-v] [-t TYPE]

options:
  -h, --help                show this help message and exit
  -d, --domain DOMAIN        Target domain.
  -il, --input-list INPUT_LIST
                             File containing a list of domains to perform DNS enumeration on, one per line.
  -n, --name_server NS_SERVER
                             Domain server to use. If none is given, the SOA of the target will be used. Multiple servers can be specified using a comma separated list.
  -r, --range RANGE          IP range for reverse lookup brute force in formats (first-last) or in (range/bitmask).
  -D, --dictionary DICTIONARY
                             Dictionary file of subdomain and hostnames to use for brute force.
  -f                          Filter out of brute force domain lookup, records that resolve to the wildcard defined IP address when saving records.
  -a                          Perform AXFR with standard enumeration.
  -s                          Perform a reverse lookup of IPV4 ranges in the SPF record with standard enumeration.
  -b                          Perform Bing enumeration with standard enumeration.
  -y                          Perform Vandex enumeration with standard enumeration.
  -k                          Perform crt.sh enumeration with standard enumeration.
  -w                          Perform deep whois record analysis and reverse lookup of IP ranges found through Whois when doing a standard enumeration.
  --shodan                   Use Shodan to query netblocks discovered via SPF (-s) and/or Whois (-w) during standard enumeration.
  --shodan-active            Actively validate Shodan-discovered names by resolving them and confirming they still match the queried netblock.
  --shodan-key SHODAN_KEY   Shodan API key. If omitted, SHODAN_API_KEY environment variable is used.
  -z                          Performs a DNSSEC zone walk with standard enumeration.
  --threads THREADS          Number of threads to use in reverse lookups, forward lookups, brute force and SRV record enumeration.
  --lifetime LIFETIME        Time to wait for a server to respond to a query, default is 3.0
  --loglevel {DEBUG,INFO,WARNING,ERROR,CRITICAL}
                             Log level to use, default is INFO
  --tcp                      Use TCP protocol to make queries.
  --db DB                    SQLite 3 file to save found records.
  -x, --xml XML              XML file to save found records.
  -c, --csv CSV              Save output to a comma separated value file.
  -j, --json JSON            Save output to a JSON file.
  --iw                       Continue brute forcing a domain even if a wildcard record is discovered.
  --disable_check_nxdomain   Disables check for NXDOMAIN hijacking on name servers.
  --disable_check_recursion  Disables check for recursion on name servers
  --disable_recurs           Disable recursion desired flag in queries.
  --disable_check_bindversion
                             Disables check for BIND version on name servers
  -V, --version              DNSrecon version
